MEDIA RELEASE

**ZUUSE & PROGRESSCLAIM.COM MERGE TO FORM LEADING SOFTWARE PLATFORM FOR
CONSTRUCTION AND BUILDING OPERATIONS**

MELBOURNE, Australia 9 October 2017 – two complementary software businesses disrupting the AECO (Architecture-Engineering-Construction-Operations) sector - Zuuse and Progressclaim - announced today the successful merger of both businesses.

Progressclaim is a cloud collaboration platform managing the entire construction project progress claim, assessment and approval process. Equally as exciting, Zuuse provide 3D BIM (Building Information Modelling) and digital asset management software to transform the way assets are traditionally built and managed across the full asset lifecycle.

Jason Lilienstein, CEO of the combined business, shares his vision: “The marketplace in the AECO sector is rapidly changing. Building and then managing assets and information across the full lifecycle (**design> construct> operate**) is undergoing significant transformation. Systems and processes are largely fragmented or paper based and manual. This inefficiency results in lost dollars, time, information, resources and materials.”

“With the combined Zuuse and Progressclaim solution, we now have the leading software platform for construction and building operations globally. Our customers range from general contractors, subcontractors and asset owners through to asset and building managers who are thrilled to have a much deeper solution to utilise across the full asset lifecycle.”

“We have removed the reliance on disparate software products or manual processes for constructing or managing assets. Our customers can rely on the solution to handle everything from day to day operational issues to longer term, strategic issues on the construction or building site.”

“Through the efficiencies created with the blend of the two businesses, we are enabling industry growth by delivering more value and enabling more systemised operations to our joint customers worldwide.”

The business has 160+ international customers located in Australia, New Zealand, UAE, UK, USA and Canada including leading asset owners and operators Fortescue Mining, Monash University, Reserve Bank of Australia, Spotless, Eden Park Stadium and Skycity Casinos and leading contractors Mirvac, Grocon, Built, Watpac, McConnell Dowell, Icon Co and ADCO.

During construction, the platform handles payment applications, defects, digital operations & maintenance manuals and 3D BIM, seamlessly carried through to building operations where the platform takes care of asset management, work orders and maintenance management, visitor contractor registration, BIM in FM and lifecycle costing and management.

END

About Zuuse & Progressclaim.com

Zuuse is an asset lifecycle solution blending 3D BIM capability, asset management and mobility to reduce costs, drive greater control and enable better decisions.

Progressclaim is a cloud collaboration platform managing the entire construction project progress claim, assessment and approval process. Both parties easily and efficiently submit their applications for payment and payment notices, saving time, reducing risk and streamlining manual processes.

The combined business is empowering over 160 customers across the globe to revolutionise the performance of their assets from beginning to end – and all the time in between.
